

COMBINING A DMC CRIMP-TOOL M22520/1-01 WITH SEALCON POSITIONER S7.000.900.DMC AND SEALCON-SPECIFIC LOCATOR

The DMC-Tool 22520/1-01 is a very common Crimp-Tool and is often the base for several crimping-applications.

By only adding specific positioners and locators to the DMC-Tools this offers an economic possibility to the customers

Step 1:

Pre-assembled Locators should be disassembled, so that the base-plate of the tool is prepared.

Step 2:

Set the positioner ideally in that orientation, that the screws will find access to the thread in the crimp-tool.

Step 3:

Tighten the screws to stop.

Step 4:

Insert the locator-bolt.
The groove will snap in
when the locator is in
position.
